Recon Pro Software Now Available for Auto Recon Firms to Improve their Operations

Sept. 3, 2007 — AutoMobile Technologies (AMT) has announced the availability of Recon Pro™, a software system that uses smartphones or handheld computers to identify, estimate, book, and bill reconditioning work in automobile dealerships and at mobile automotive reconditioning companies.

Recon Pro, which integrates with QuickBooks® and other accounting software, tracks every vehicle by VIN and creates customized reports that allow the vendor and the dealer to quickly see revenue, profit, service writer and technician sales.

“Managing administrative detail has always been a challenge for recon companies, especially during times of growth and business success,” said Paul Maximov, president of AutoMobile Technologies. “Recon Pro allows business owners to spend their time analyzing data and taking action, instead of being bogged down in collecting and entering data into accounting systems.”

The software supports a variety of reconditioning services, including paintless dent repair, paint touchup, interior repair, wheel and windshield repair, and auto detailing. Each recommended service is entered on a smartphone or handheld computer by the service estimator; a service estimate is calculated, and the estimate is printed at the push of a button.

Recon Pro also provides an “executive dashboard” that can be viewed from any authorized PC with Internet access. Easy-to-read, customized charts and reports summarize critical business for reconditioning companies and dealerships, including a summary of estimates, work orders, revenue, productivity, and other information.

The software is now available for installation, with purchase directly from AutoMobile Technologies. Applications are also being accepted for sales agents to resell the system.

About AutoMobile Technologies

AutoMobile Technologies is a leading provider of service-related software for the automotive industry. Its products provide better visibility and control over customer service and back-office operations, and easily integrate to accounting systems such as QuickBooks®. AMT develops software applications tailored to the specific demands of recon vendors, new and used car dealers, and automotive companies. AMT’s expertise in smartphone and handheld computer

technologies and Web-based applications provides software that is easy to use from any location.
