New Software Shortens Time to Frontline Ready for Used Car Operations

Feb. 8, 2008 — AutoMobile Technologies (AMT) has announced Version 1 of its Recon Monitor™ software. The software increases the profitability of dealership used car departments, standalone used car businesses, and collision centers by speeding up the time to prepare vehicles for sale through improved reconditioning vendor tracking.

Paul Maximov, president of AutoMobile Technologies, said, “There has been an information gap in the preparing of used cars for sale which costs dealerships millions of dollars every year in carrying costs and excess recon vendor fees. We have solved the information gap through an easy-to-learn, affordable system that uses cell phones and Web-based technology.”

With Recon Monitor, a service manager can always see all of the activities needed to complete work on every vehicle, and can immediately spot a potential bottleneck. Also, no vendor is paid until a car is inspected and the work signed off. In fact, the payment is generated by the dealer rather than the vendor.

Recon Monitor is available for immediate installation. It may be purchased from AutoMobile Technologies. Sales agent opportunities are also available to qualified companies with existing relationships with recon companies and used car sales organizations.

About AutoMobile Technologies

AutoMobile Technologies is a leading provider of service-related software for the automotive industry. Its products provide better visibility and control over customer service and back-office operations, and easily integrate to accounting systems such as QuickBooks®. AMT develops software applications tailored to the specific demands of recon vendors, new and used car dealers, and automotive companies. AMT’s expertise in smartphone and handheld computer technologies and Web-based applications provides software that is easy to use from any location.
